

Notes

Big/Detailed User Stories Completed for Iteration1

- Setup back-end of the website, i.e database, frameworks and its dependencies.
- Enable authentication of Clients and Doctors to through login page and database records.
- Add clients through user interface to database.
- Enable doctors to view list of client records.
- Enable editing of client records created, such as editing name, medication and appointment.

Moved to Next Iteration (Iteration 2)

- Scheduling appointments with doctors. Hence, no testing was done for this feature.

N/B:

- Every added user is a client by default, to become a doctor an administrator has to switch a user account to a doctor by setting the 'admin' column in the users table to 1.
- The SMTP driver has to be configured in the .env file for the 'Forget Password' page to function currently.
